

Fungus Pharm

Saves

Tomato Crop

- **No Suiting Up**
- **No Re Entry Interval**
- **No Unpleasant Odor**

Dear Pharm Solutions,

We have been growing organic tomatoes for a few years now and recently, after our USDA Certification, are selling organic heirloom tomatoes commercially.

There are many issues that we growers must face in a greenhouse environment and the worst for me is fungus. I have lost 10 times as many plants to fungus than I have to insects, disease or virus combined. Faced with losing an entire greenhouse of 750 plants to a fungal pest, I tried to cure the problems with; Fungastop, baking soda, soapy water and pruning to find the fungus/mold was not even slowed down.

When all else failed, I found Fungus Pharm which came to my aid and saved me many thousands of dollars and many man hours of labor. As a small organic farmer I could not have sustained a loss of that magnitude early in the season and would have lost my entire crop. Fungus Pharm cured the fungus, saved the plants and more importantly, saved the entire crop from destruction.

I write this after the plants have made a full recovery and are producing beautifully as you can see in this photo. Thanks for being in the fore front of what is to be a great future in true organic Pharming!

Michael Thompson,
